

SAP Consultant (m/w/d)

(09/01/02)

Ort: Stutensee (Baden-Württemberg) Kategorie: Kaufmännisch

NDT Global is the leading provider of ultra-high-tech diagnostic inspection solutions, advanced data analysis and integrity assessment services for ensuring the safety and longevity of energy-sector infrastructure assets. Recognized as the forerunner in ultrasonic inspection technologies comprising Pulse Echo, Pitch-and-Catch and Phased Array, as well as Acoustic Resonance (ART Scan) methodologies, the company also deploys a range of non-ultrasonic technologies, such as Inertial Measurement Units, with more under development. NDT Global strategically applies its inspection technologies to detect, diagnose and model various types of threat—circumferential or axial cracks, metal loss, geometry, mapping, and more—across diverse classes of assets. By providing predictive, decision-ready insights driven by the world's most accurate data, NDT Global enables the conditions for asset owners to optimize infrastructure health and drive operational efficiencies while reducing risk and minimizing their carbon footprint.

NDT Global is part of Previa, a fast-growing, innovative industrial technology group focused on advanced diagnostic technologies to monitor the world's infrastructure health. The Group serves asset owners, large engineering firms, and service companies globally in markets such as Aerospace, Civil Infrastructures, Energy, Mining, Power Generation, and Rail. Previa believes that advancing science and technology via sensors, hardware, robotics, and software makes the world more productive and safer for people, business and nature. The company employs over 1,300 people throughout 28 offices worldwide and serves clients in more than 110 countries.

Ihre Aufgaben

The goal of the SAP Consultant is to provide support for the Enterprise Resource Planning (ERP) System by supporting and providing basic training to end users, executing assigned ERP projects, generating, and improving reports, implementing enhancements incl. coordination and execution of the testing and approval, support migration of new releases and being a primary contact with the ERP service provider.

- Performs diagnostic tests, troubleshoots and resolves issues reported by end users to optimize system performance
- Support the design, development and implementation of systems that are fit for purpose and free from fundamental design flaws with the input from project teams made up of user and technical personnel
- Works with and support of business process owners to ensure effective use of ERP system by debugging, creating connections to other systems for exchange of data and overall application of improvements to get the most out of the ERP system (including the support for report writing and statistics gathering)
- Collaborates closely with all business functions to determine their ERP-related needs and support in relation to the system
- Provide technical support and upgrades, including managing day-to-day maintenance on the system, new user installation and user maintenance, as well as support of any system upgrades, outages, configuration & development of system including the associated testing
- Provide basic end user training to new employees as well as the setup and update of user and their role
- Review, develop and implement opportunities for continuous improvement in evaluating and optimizing processes, striving to deliver process automation, efficiencies, and improved accuracy
